Height adjustment

adjusting the height of the set to your height

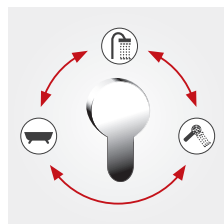

Mounting adjustment

to facilitate proper vertical installation

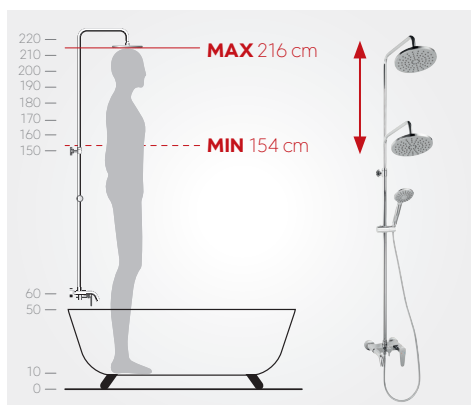

Ceramic switch

a durable, comfortable and ergonomic solution

Before buying a shower column with a bathtub mixer, it is worthwhile to pay attention to the height of the shower. In the case of Algeo, thanks to the possibility of infinitely variable adjustment of the height of the set (also after installation), it is up to 206 cm from the bottom of the bathtub. If the set is used by e.g. children, it is possible to adjust the height of the shower plate even at 144 cm*.

* refers to the installation of the mixer at a height of 60 cm from floor level and a bathtub installed 10 cm above floor level.
