NEW

ALGEO SQUARE MEDICO

Function and
quality

Algeo Square Medico are new models in the series, which have been equipped with specialized handles for wrist or elbow operation. They are ideal for office bathrooms or commercial spaces where toilets are used by many people.

Safety and sterility

With the new handle we can open the water jet without touching the tap with our hand. The wrist-opening technique is intuitive and simple. It gives additional protection against contact with surfaces where bacteria and viruses may remain.

Specialist handle

Safe adjustment

The temperature and flow can be adjusted comfortably and safely with the elbow or wrist and the hands do not come into contact with the mixer surface.

Ergonomics of the handle

Thanks to the length and design of the handle, the use of the mixer is also easier for people with limited hand efficiency.
