HEATING SOLUTION & INSTALLATION

FERRO®

CATALOGUE 2025

Comprehensive solutions for the home

The comfort of use and the safety of domestic installations are the objectives that guide us in the creation of our range. In order to guarantee these, we are successively adding further products, the installation of which will allow us to create a complete system, and the mutual operation of which will give this guarantee of long-term smooth operation and the efficiency and quality that our customers care about.

VITTO GUN METAL

Stylish and Modern

The rawness and simplicity of an interior don't have to feel cold or neutral. The interplay of light with the copper glow of the walls can effectively add warmth and coziness to a space. The uniqueness of minimalist interiors is highlighted by details, including mixers and showers in the trendy new gun metal finish. The graphite-black coating of the fixtures adds elegance and reinforces the modern character of the bathroom.

ZUMBA GUN METAL

On trend

Compact, modern apartments designed with a cohesive color scheme and minimalism are the perfect setting for the new Zumba model in a gun metal finish. The harmony created by a subdued color palette is a trend worth incorporating into designs—both visually appealing and highly functional. Just like Zumba.

Get to know FERRO GROUP

FERRO Group is one of the largest manufacturers of sanitary fittings, installation systems, and heating solutions in Central and Eastern Europe. The scale of operations, the strategy for expanding the product range and distribution network have made FERRO Group's brands well-known and valued in dozens of countries. One of the top priorities for all companies within the Group is building customer trust by delivering durable and functional products.

Decades of experience, a highly skilled team, and an innovative market approach are key elements of FERRO Group's success. A boldly executed vision, clear goals, and dynamic growth reassure business partners, suppliers, and investors that they are working with a reliable and trustworthy company.

The mission of FERRO Group is to provide customers with safe and reliable solutions for their homes, meeting their heating and domestic water needs through modern and long-lasting products from the Group's brands.

To continuously improve and expand into new markets, FERRO Group leverages its key strengths, including:

Market Experience
Both the long-standing presence in the industry and expertise in sales across local markets are valuable assets that help build customer loyalty and trust.

Comprehensive Product Range
FERRO Group is one of the few manufacturers in Europe offering such a wide and complete selection of products for installation and bathroom and kitchen equipment. From heat sources to warm water supplied by Ferro's mixers and fittings, the Group provides integrated solutions for homes and businesses.

Quality and Safety
At every stage of cooperation, FERRO Group operates according to the highest standards. Legal and certification requirements are always a priority when developing the product portfolio. With an ISO 9001:2008 Quality Management System in place, these standards undergo continuous monitoring and improvement.

People and Relationships
A diverse, international team built on shared values is one of FERRO Group's most valuable assets. The company bases its relationships with customers and business partners on principles of partnership and integrity, ensuring long-term, trust-based cooperation.

Potential and growth

Leveraging Local Potential and Availability
Decades of experience in manufacturing, adaptation to geopolitical changes, and market trends have enabled the Ferro Group to develop a well-thought-out growth strategy and build an efficient logistics network across Europe.

The construction of new warehouses, as well as the expansion and modernization of existing storage facilities, has increased product availability and accelerated order fulfillment for local markets.

The development of implementation teams, investment in projects, and research are key elements of the production growth strategy in Poland and the Czech Republic. Innovation and alignment with market trends and customer needs drive the successful sales of Ferro Group's own products.

FERRO GROUP brands

We listen to our customers' needs and create high-quality products under the following brands: Ferro, FDesign, Nobless, Metalia, Titania, and Termet. Each brand is tailored to meet the needs of different customer groups, but they all share a common goal—to simplify everyday life and ensure safe, comfortable, and functional home interiors.

Global Brand

FERRO GROUP

Group Brands

novaservis FERRO GROUP · termet FERRO GROUP · HP Heating Polska

The products of FERRO Group's brands are currently sold in over 50 countries worldwide.

FERRO GROUP →

FERRO Group owns multiple product brands, giving it a significant edge over competitors and ensuring a strong market position. The diverse and comprehensive product portfolio enables the company to attract customers from various market segments.

FERRO

A brand offering sanitary fittings, bathroom and kitchen accessories, as well as installation and heating solutions. Recognized for quality, reliability, and durability.

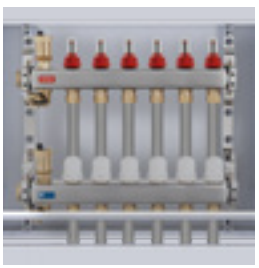

termet

A Polish brand with an 80-year tradition in manufacturing gas boilers and water heaters. Today, it is a respected supplier of modern heating solutions, including both traditional systems and renewable energy (RES) technologies.

FDESIGN

Created for customers who value both quality and contemporary design. The premium products of FDesign are sold in bathroom showrooms, attracting the interest of interior designers and design enthusiasts.

The World of FERRO GROUP

The roots of FERRO Group's manufacturing companies are deeply connected to local communities and traditions. These foundations shape the company's corporate values, which are the basis of its shared success. With courage and continuous development, openness to new markets, and respect for people, FERRO Group has built strong trust among its partners and customers worldwide.

Global Vision, Local Roots

FERRO Group operates across European markets through local distribution companies. This approach allows the company to understand market needs thoroughly and adapt its operations to local conditions. Flexibility and regional presence, combined with the global capabilities of the Group, make FERRO a leader in the sanitary fittings and heating technology industry in Europe. The consistent pursuit of its international expansion vision drives FERRO Group's growth into new markets.

novaservis FERRO GROUP →

Novaservis is a brand with a long tradition on the Czech and Slovak markets. Products manufactured under the Metalia, Titania and Nobless brands place Novaservis on the podium of manufacturers and retailers of bathroom equipment.

METALIA

A well-known and respected brand of bathroom and kitchen taps. The range also includes a water-saving programme.

TITANIA

A trusted and customer-favorite brand, ensuring good quality at a reasonable price.

NOBLESS

Nobless is a brand offering products of excellent design, tailored to trends and customer tastes. It is mainly known in the markets of Central Europe.

Perfect
for Your Home

We ensure that our products provide long-lasting performance. Low energy and water consumption, safety, and everyday comfort are our top priorities. We understand that every home has different needs, and our products are an integral part of daily life for millions of customers. Our goal is to make FERRO's offering perfectly suited to every user—modern, precise, and built to last for years.

Among FERRO's wide range of products, there are true design gems, recognized and appreciated in industry competitions and awards.

Integrated solutions

While expanding FERRO's product range over the years, we always focus on innovation and user needs. We consider diverse tastes and requirements, offering flexibility in selection from various perspectives—style, functionality, and budget. As a result of our continuous development, we provide solutions for bathrooms, sanitary installations, and heating systems, enabling the creation of modern setups. Their integrated system approach allows for the seamless selection of components, ensuring consistent quality and guaranteed performance within the FERRO system.

In the kitchen and bathroom, comfort and functionality are key. FERRO offers everything you need—mixers, sinks, showers, and accessories. Our water-saving collections help reduce bills while combining modern design with top quality. With a universal style, they fit various interiors, ensuring a harmonious look. Certified quality guarantees durability and reliability.

Their universal design makes them a perfect fit for kitchens and bathrooms in various styles. Our comprehensive range ensures a harmonious interior look. Flawless craftsmanship and elegant design are our priorities, with quality confirmed by certifications and approvals.

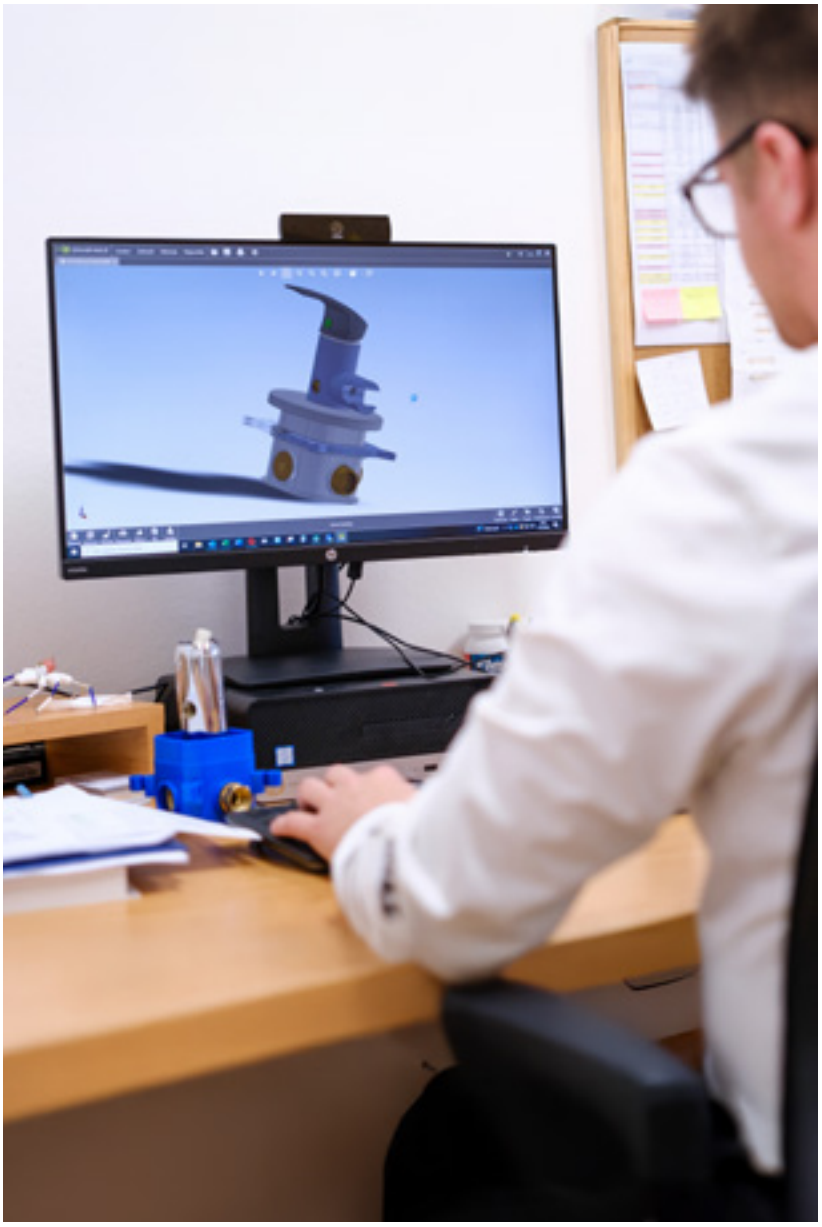

Production Process

FERRO Group is one of the largest manufacturers of sanitary fittings, installation systems, and heating technology, including heat sources, in Central and Eastern Europe. We combine local roots with international reach. The strength of FERRO Group brands lies in the exceptional quality of products manufactured in Świebodzice, Poland, and Znojmo, Czech Republic, following European technological and work organization standards. Additionally, selected items from FERRO's extensive portfolio—spanning several thousand models—are produced in various factories across Europe and Asia.

Before leaving the factories, all products undergo meticulous quality control. Our customers receive tested and reliable products, ensuring many years of comfortable use.

We continuously update and expand our product range, offering unique solutions in 25 categories—from bathroom and kitchen mixers, sinks, and sanitary fittings to measurement fittings, radiators, Termet heat sources, pumps, and heating control systems.
FERRO Group operates production facilities in Poland and the Czech Republic, where we develop heat sources, manifolds, mixers, and accessories. Our distribution network spans Romania, Bulgaria, Croatia, Slovakia, Lithuania, and Hungary, with representative offices in Serbia, Greece, Ukraine, and Azerbaijan.

Logistics

FERRO Group owns several product brands, giving it a strong competitive edge and market position. We operate modern logistics centers in Skawina (Poland) and Buftea (Romania), along with multiple warehouses across Europe. These automated facilities enable fast and efficient order processing. FERRO continues to expand its logistics network, optimizing delivery routes with a focus on cost efficiency and environmental impact.

Since 2025, all FERRO Group companies have been operating on a unified ERP system (Enterprise Resource Planning), further enhancing planning, reporting, and order fulfillment. We have been adhering to global standards since 1992—and we keep evolving.

Responsibly and Comfortably

Customer needs and the desire to meet them in the best possible way play a key role in shaping our product range. Reducing plastic waste and promoting healthy living are made easier with FERRO's filtered water systems. These solutions offer ease of use, accessibility, and everyday comfort, providing real benefits for every household.

Ecology and corporate responsibility

Sustainable use of our planet's resources is not a trend—it's a necessity. Choosing eco-friendly solutions doesn't mean sacrificing comfort or aesthetics. FERRO's user-friendly products help reduce cold and hot water consumption while significantly lowering heating costs. Particularly noteworthy are the VerdeLine faucets and showers, as well as thermostatic products and radiator accessories, designed for greater efficiency and sustainability. We are also expanding the Termet product line to include renewable energy solutions (RES).

Modern consumers increasingly prioritize resource efficiency and environmental responsibility when making investment decisions. At the same time, operating costs and product longevity remain key considerations. These values are at the heart of FERRO's product development strategy.

New quality in saving

The Unified Water Label Association, based in Newcastle (UK), is an association whose main objective is to implement uniform water and energy labelling of sanitary products throughout Europe. The world's water resources are limited and water scarcity, with a growing population and climate change, is becoming a major global issue. This is why water consumption labels have been developed to raise awareness of which appliances use less water, so that we use water more efficiently. Ferro S.A. is a manufacturer focusing on ecological solutions and supporting the policy of saving natural resources. Selected VERDELINE products from our offer are labelled with WATER LABEL, thanks to which our customers know which of them use less water and energy, which additionally translates into reduced costs.

Water Label certified products:

Chrome
Glossy chrome coating is a universal choice, fits perfectly any colour and style of arrangement.

Black-chrome
Chrome-broken black looks great in elegant bathing salons.

Black
Fashionable black underlines the friendly ambience of the bathroom interior, making it a unique place of care and relaxation.

White-chrome
This beautiful combination of bright colours brightens up the interior, which is very important especially in small bathrooms.

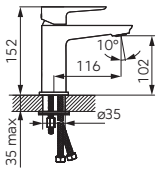

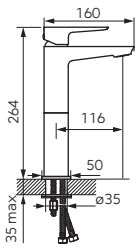

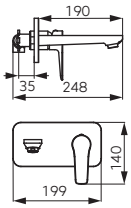

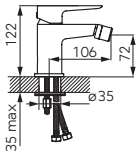

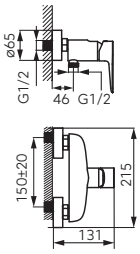

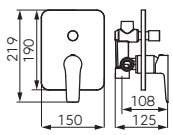

Old bronze
Durable coating, looks like old bronze.

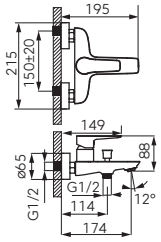

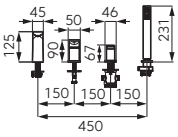

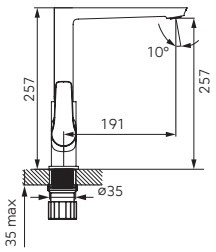

Gold
Durable PVD coating in gold colour.

Bright gold
Durable PVD coating in bright gold colour.

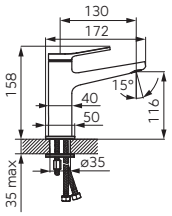

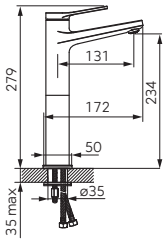

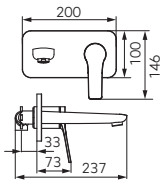

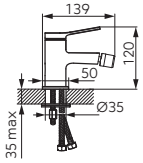

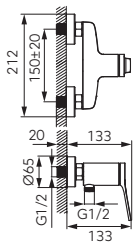

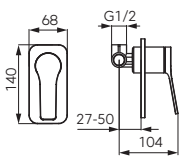

Gun metal
An elegant combination of steel and black shade that brings out the depth of grey from black.

Shower programmes

A modern shower, in addition to providing a comfortable bath, can also perfectly decorate the bathroom interior. That is why Ferro offers perfectly highly admired by users functional shower sets equipped with water-saving components and thermostatic mixers, as well as flush mounted sets with a mixer and a rain shower. Sets with elegant rain showers and shower handles of geometric or round form covered with shiny chrome coating look great in modern shower cabins.

ARE14 Retro toilet brush

Bathrooms accessories

Accessories are often called bathroom jewels as these small elements perfectly complement the whole interior. Made of high quality brass and transparent or matt glass, and covered with a glossy chrome coating, they wonderfully decorate the interior and facilitate everyday care.

Accessories and spare parts

Today's customer is demanding, attaches great importance not only to the appearance of mixers or shower sets. Various details, which are an important part of bathroom fittings, are also becoming important. Accessories such as traps, drain plugs or spouts should therefore not only be functional, robust, but also aesthetically finished. Often placed in a visible place, they provide comfort to the user and emphasize the beauty of the whole arrangement in its smallest detail.

G1/2	G3/8	74,5	1/2"x3/8"	Z293-BL	10,99
G1/2	G1/2	74,5	1/2"x1/2"	Z294-BL	10,99

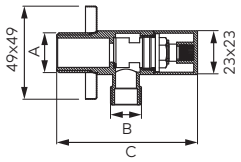

Angle valve with ceramic head and rosette

- nominal pressure: 1,0 MPa (10 bar)
- max. working temperature: 90 °C

A	B	C [mm]	connection dimensions	Index	EUR
G1/2	G3/8	74,5	1/2"x3/8"	Z293	8,99
G1/2	G1/2	74,5	1/2"x1/2"	Z294	8,99

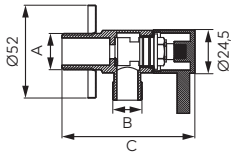

Angle valve with ceramic head and rosette

- ceramic head
- no contact of flowing water with paint finish
- the valve body doesn't scratch the rosette during installation
- nominal pressure: 1,0 MPa (10 bar)
- max. working temperature: 100°C
- finish: gold, PVD coating

A	B	C [mm]	connection dimensions	Index	EUR
G1/2	G3/8	75	1/2"x3/8"	Z293-G	10,99

		**Zumba** **standing sink mixer with flexible spout** • for unpressurised, flow-through water heaters • ceramic cartridge • single hole assembly • black flexible spout • possibility to freely shape the spout • M22x1 flow regulator • pressure reducer - 2 pcs (1 spare) • 3 flexible connections G3/8 x M10 x 1, 50 cm long	chrome	**BZA4BLP**	**52,99**

Wall-mounted mixer taps

The collection of standing kitchen mixer taps is complemented by a large group of wall-mounted kitchen models. This solution is also appreciated by a large group of admirers. The possibility of selecting a product with a specific length of spout rotation is their main advantage.

FERRO

Sinks

The collection includes granite and stainless steel sinks in various sizes and shapes, designed for individual users and for catering establishments. Granite sinks with a surface resembling the structure of stone are an interesting proposition for originally furnished interiors. Models made of stainless steel AISI 304 are distinguished by timeless design and fit into any arrangement. FERRO sinks are characteristic for their exceptional durability and resistance to external factors.

Specialist fittings

Created for public facilities and the special needs of people using this type of mixer taps and showers. The offer includes specialized mixer taps, showers and accessories that meet the highest standards of hygiene, are safe and comfortable to use, and are characteristic for their durability and resistance to various damages. Mixer taps and showers equipped with innovative components ensure maximum saving of water and energy used to heat it.

Complete FERRO system

The complementarity of FERRO products guarantees the consistency of the solution in terms of price effectiveness, purchase consolidation as well as comprehensive service and investment support.

Bathroom radiators
These are not only devices providing heat, but also an important element of interior design. Thanks to models in various shapes, colors and sizes, you can perfectly match the radiator to your needs.

Page 418

Decorative thermostatic sets
A wide range of radiator fittings and thermostats, including decorative sets in many colours. Regardless of the type, size and colour of your radiators, you can easily equip your heating system with the necessary control equipment.

Page 446

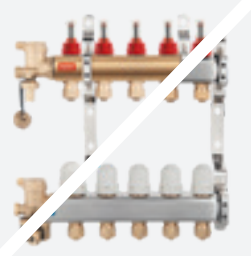

Mixing groups
are an indispensable element of equipment for surface heating systems, including floor heating. There are several models on offer, dedicated to radiators of different sizes and parameters.

Page 301

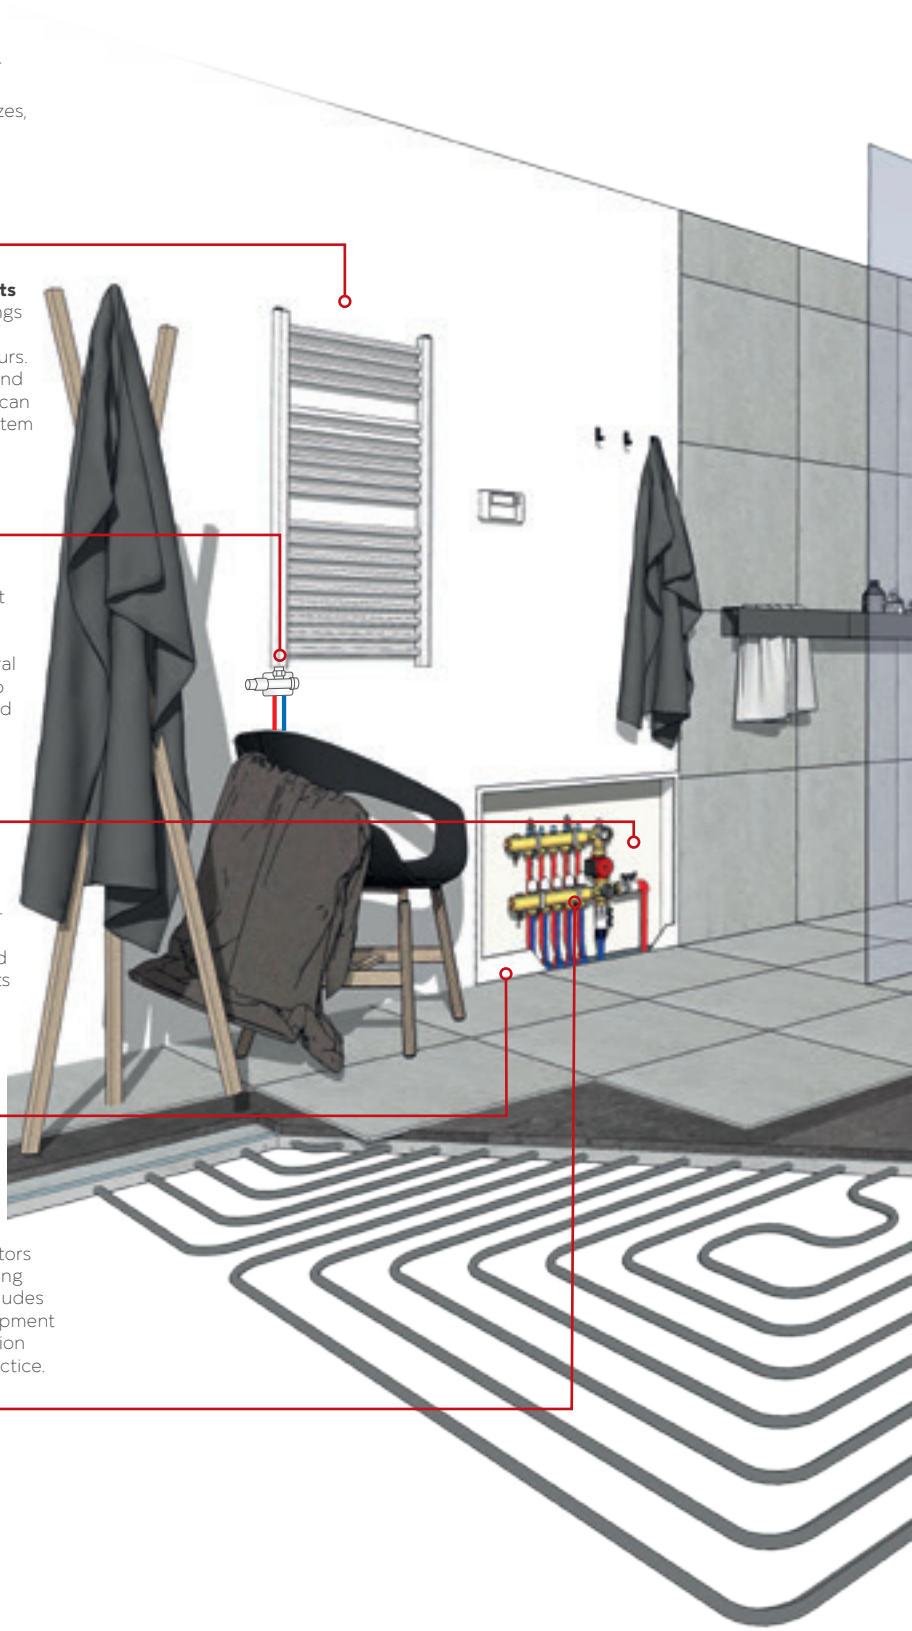

Manifold cabinets
They enable manifolds and their accessories to be assembled aesthetically. You will find a wide range of flush-mounted and surface-mounted cabinets in various lengths, depths and heights, as well as models with adjustable dimensions.

Page 299

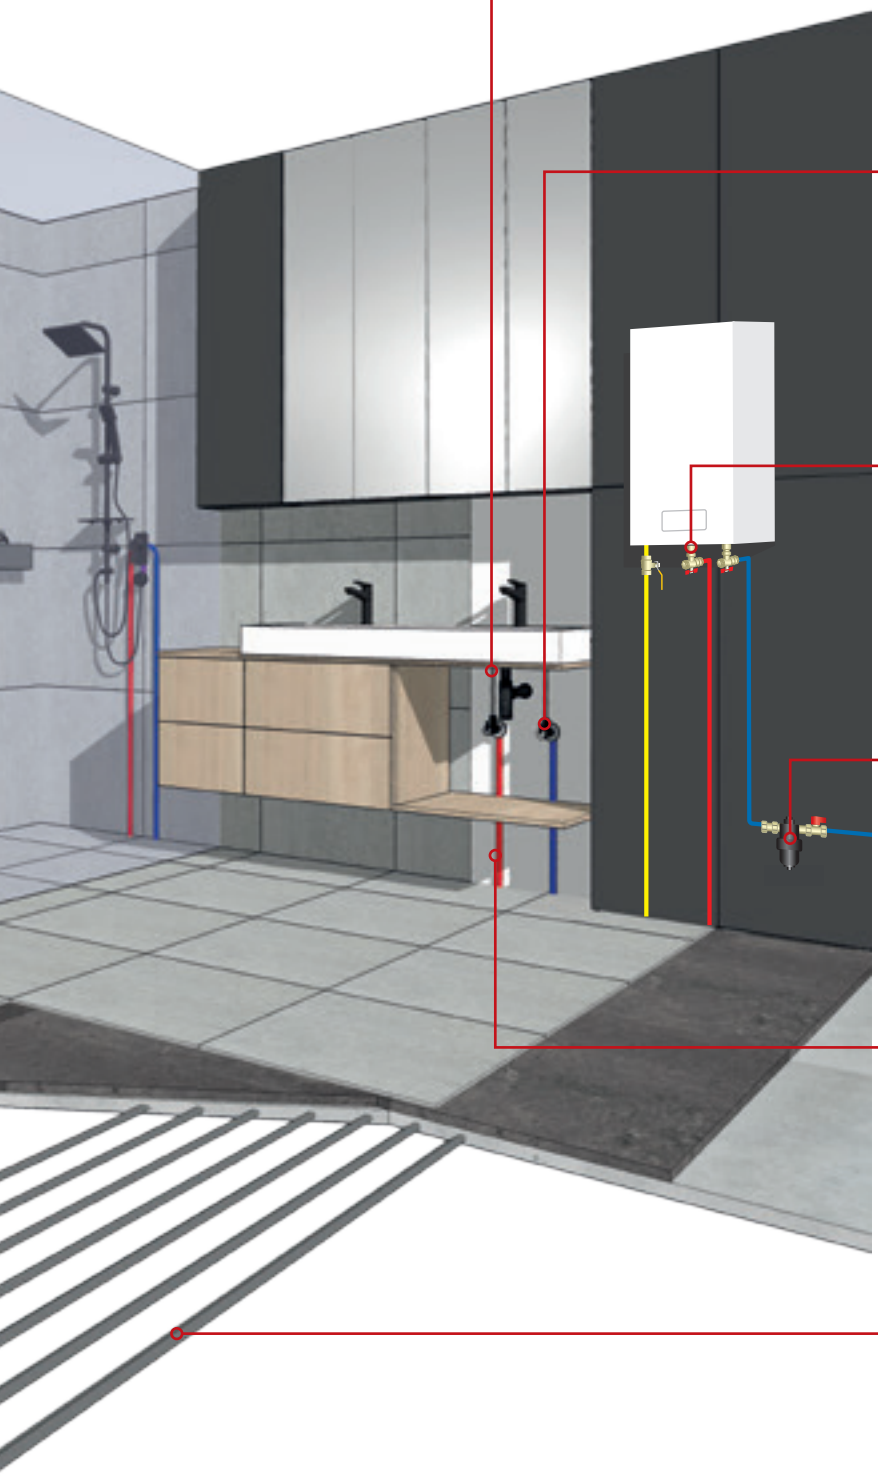

Manifolds
They are indispensable devices in every modern radiator installation, both with classic convection radiators and surface radiators, including floor radiators. The range includes models with a variety of equipment and fittings to suit all installation solutions encountered in practice.

Page 285

The FERRO system is an opportunity to fully realize your endeavour based on proven FERRO high quality components. Complementarity of the offer shall undoubtedly save time and guarantee reliability, harmony and functionality of the solution.

Connection hoses
They are an indispensable component wherever there is a need for a flexible connection between system components. We offer hoses in a wide range of lengths, types and connection diameters.

Page 346

Angle valves
Enable connection of household appliances such as washing machine, dishwasher, faucet, gas cooker, etc. In FERRO's offer you can choose from many models, differing in style, purpose and functionality.

Page 340

Gas fittings
A wide range of gas fittings products, including: gas ball valves, gas filters, gas hoses

Page 356

Magnetic dirt separator
They are devices used in various systems, especially in heating, cooling and industrial installations, to remove contaminants such as rust, metal filings and other particles from the working fluid.

Page 331

Connectors
In the wide range of fittings for different types of installations, you will find fittings for homogeneous and multilayer plastic pipes, steel pipes and copper pipes.

Page 277

Ferro System Surface heating and plumbing
Multilayer flexible pipe for use in heating, hot water and cold water installations.

Page 275

Production process

FERRO's production is carried out in several modern factories around the world based on the highest quality raw materials and components from reliable suppliers from Europe and Asia.
We have our own production plant in Znojmo (Czech Republic) with a modern logistics centre. This, combined with our location in the heart of Europe, ensures efficient and effective distribution between the Group companies and to the various European and global markets. Before leaving the factories, all products undergo a meticulous quality control, which ensures that our customers receive a proven, reliable product that provides many years of comfortable operation.

The factory in Znojmo has a modern CNC machining plant, its own glassworks, assembly line, electroplating line, as well as faucet folding and polishing stations. The plant has almost 40 years of production tradition. Today not only mixers are manufactured there, but also bathroom accessories, bathroom fittings and brass distributors. The plant also boasts a fully automated chrome-plating plant with closed water circulation, adapted to the latest environmental requirements.

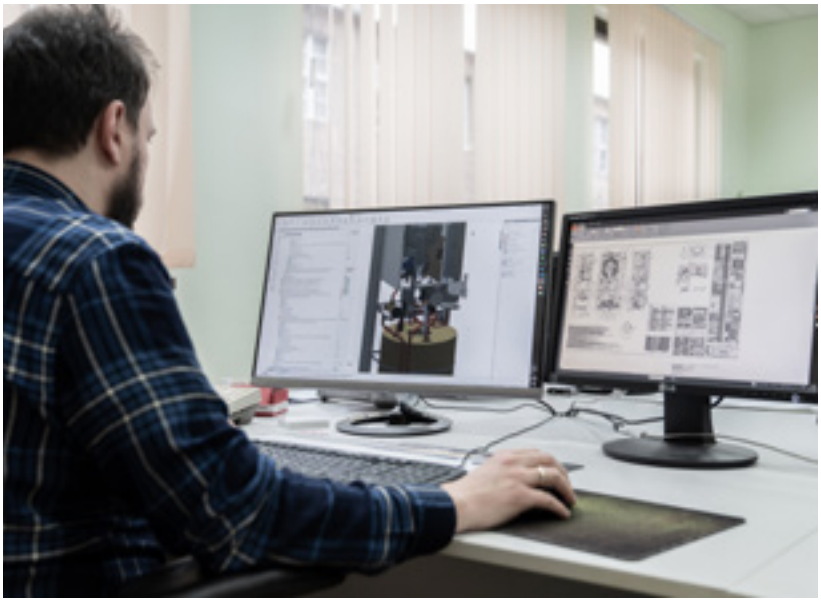

Experience and passion

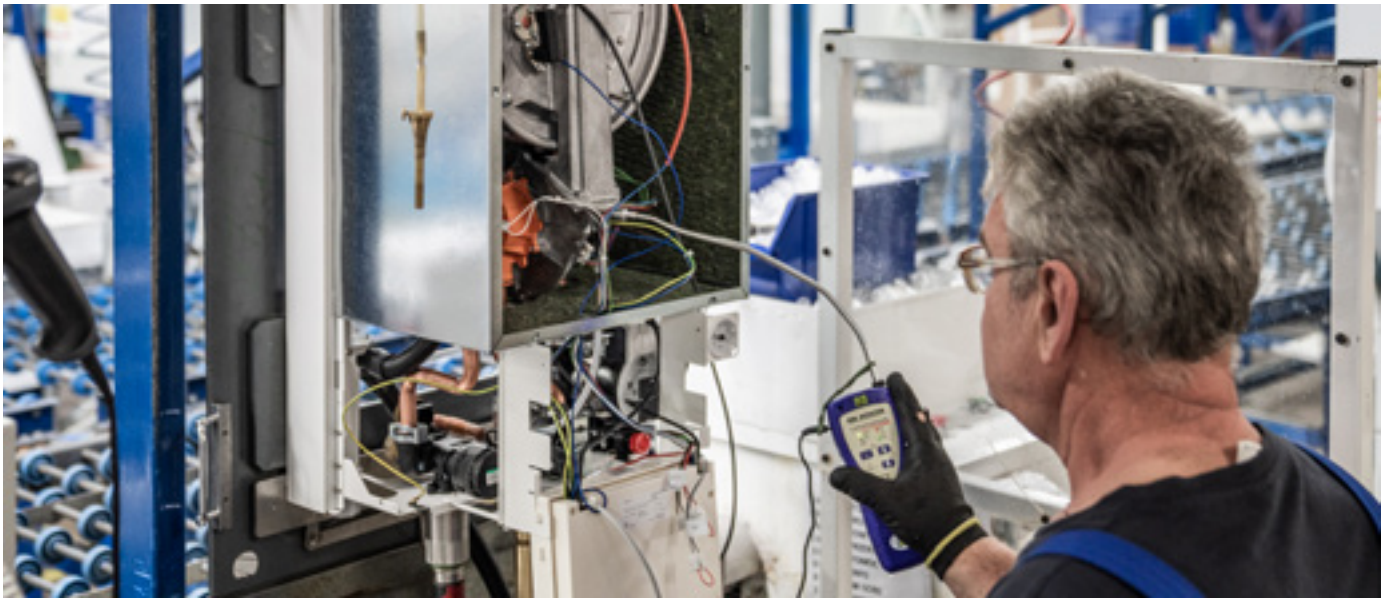

Our company and its success is created by people who constitute the most valuable asset of the Group. FERRO's organizational culture is created by people with passion and open-mindedness, which is why we employ exceptional employees and ensure their continuous development. We believe that an appropriate incentive system, good working conditions and team partnership help to work effectively, develop employees and influence the further development of the company. In our daily activities we are guided by values that allow us to build an extraordinary working atmosphere.

WE WORK WITH EXTRAORDINARY PEOPLE BECAUSE IT IS THANKS TO THEM THAT WE ACHIEVE EXTRAORDINARY RESULTS.

PEOPLE

Our team consists of almost half a thousand people from all over Europe. The experience of our long-time employees is complemented by a fresh look of these younger ones, thanks to which we realize creative ideas and implement innovative solutions together. And, together we create an energetic, efficient organization that values teamwork, mutual respect and continuous improvement.

Proven in action

Our products are regularly awarded and honoured for their robust quality and high standard of workmanship. Many of them have won valuable distinctions granted by the environment and industry institutions and reputable interior design, construction and financial magazines.

The FERRO Group places particular emphasis on meeting the requirements of current standards, maintaining high technical parameters, safety and functionality of its products. That is why we have implemented the ISO 9001:2015 Quality Management System.

RELIABLE TECHNOLOGY AND EUROPEAN STANDARDS

What matters
is the details

At every stage of production, FERRO attaches great importance to details, both in terms of their perfect execution and finish. Thanks to this, every product of the company is characterized by the highest quality and impeccable appearance.

QUALITY CONTROL AND PAYING ATTENTION TO DETAIL

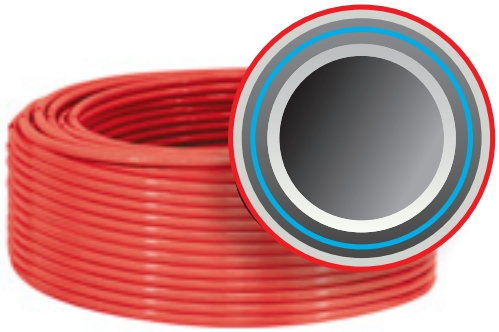

QUALITY UNDER SCRUTINY

FERRO takes care of the excellent quality of its products. The company puts particular emphasis on meeting the requirements of the applicable standards, maintaining high technical parameters, safety and functionality of products. All the company's products are subject to extremely accurate and restrictive quality verification procedures. They are inspected at every production stand. The correct course of quality control processes is supervised by highly qualified engineers responsible for quality and product certification. The auditors check compliance with the procedures of the quality assurance system. These include the procedures specified by the Polish PN and European PN-EN series standards and the procedures related to the Quality Management System.

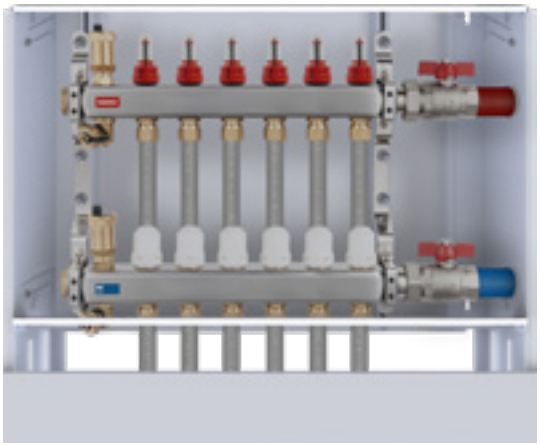

Underfloor heating

FERRO is adding pipes and fittings to its range of PEX and PERT underfloor heating systems. This continues the expansion of the product range. Together with heat sources of the TERMET brand and the existing FERRO offer, it will allow investors to create an individually designed and energy-efficient heating system. The choice of FERRO and TERMET products is a guarantee of durability, reliability, easy operation of the heating system and, what is extremely important, availability of spare parts. The company has been present on the market for many years and is well known to installers. Every investment is different. We have the right products for each.

Valves
and manifolds

Manifolds and valves are important components in every central heating and sanitary installation. FERRO products are designed for both single-family and multi-family housing, as well as industrial construction. FERRO offers a wide range of these products. FERRO's manifold production includes a range of brass and steel manifolds for heating and manifolds for potable water gaining increasing popularity in modern house and building designs. All provide installations with trouble-free operation for years. Our valves and manifolds undergo meticulous quality control before leaving the factory floor. We are close to the zero waste philosophy, which is why we package them in eco-friendly cardboard packaging. By choosing FERRO, you are assured of the durability and reliability of our products.

FERRO system

F-Power PEXa/EVOH

F-POWER PEX PEXa Pipe is a high-density, cross-linked, high-density polyethylene, made using the peroxide method with an EVOH oxygen barrier. The high degree of cross-linking of the pipes ensures long-term pressure and temperature resistance.The main advantage of the oxygen barrier is its effectiveness in protecting against the penetration of oxygen molecules. Pipes can be connected by means of twist and press fittings.

Application

- Surface heating and cooling
- Cold and hot water installations
- Drinking water installations

F-COMFORT PERT 5-layer pipe

F-COMFORT PERT pipe is made from second-generation PERT II/EVOH/PERT II polyethylene, making it more resistant to high temperatures and pressures. The EVOH (anti-diffusion barrier) layer is located between the inner and outer layers of PERT II. As with F-Power PEX pipes, the pipes can be connected using twist and press fittings..

Application

- Surface heating and cooling
- Cold and hot water installations
- Drinking water installations

PERT SYSTEM

F-Comfort PERT EVOH 5-layer pipe

NEW

- outer diameter 16 mm, 17 mm
- wall thickness 2 mm
- five layers - anti-diffusion barrier EVOH
- material PERT II - polyethylene with improved thermal resistance second generation
- mechanical characteristics: class 4, class 5
- maximum operating temperature 90°C

Stainless
steel manifolds

Automatic air vent

Stainless steel manifold beam AISI 304

Drain valve

High quality flow meters

Thermostatic valves

Compression fittings for multilayer pipe 16 x 2 mm

WARRANTY 15

AISI 304

GLYCOL 50%

H_2O

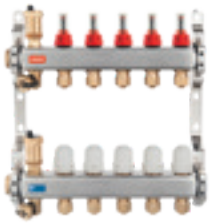

Advantages:

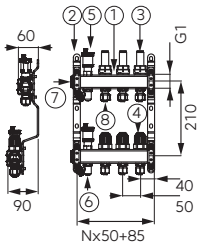

- precise and robust design
- high quality materials
- 11 models of each type
- execution: stainless steel AISI 304 (manifold beams)

Characteristics:

Manifolds consist of two beams with 1" connection diameter, made of AISI 304 stainless steel, which ensures maximum resistance to corrosion and thus guarantees long-term, failure-free operation. An additional element of the durability of the devices are special grips with rubber insulation that suppresses vibrations and noise. Grips give the structure rigidity and at the same time maintain a constant distance between beams. Designed to work in systems with convection heaters or for installation in surface heating - they perfectly fulfil the function of a connector of heating system elements while optimizing the fitter's work.

Brass manifolds

Brass manifold beam CW617N

Air vent and drain unit

High quality flow meters

Thermostatic valves

Compression fittings for multilayer pipe 16 x 2 mm

WARRANTY 15

CW 617N

GLYCOL 50%

H_2O

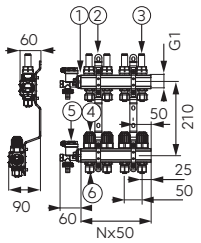

Advantages:

- precise and robust design
- high quality materials
- 11 models of each type
- execution: brass CW617N (manifold beams)

Characteristics:

Brass manifolds are the basic element of a central heating system. They are used in systems with convection radiators, floor radiators and mixed systems. Manifolds enable precise regulation of installations and reliable operation of the whole heating system.

			maximum number of manifold circuits	

Description

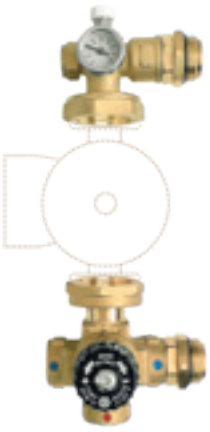

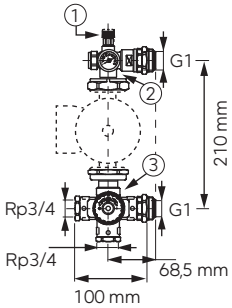

1" underfloor heating mixing group

The group includes:
- 4-way thermostatic valve Rp3/4, temperature adjustment range 25 - 50°C (4)
- electronic circulation pump (3)
- thermometer 0 - 80°C (2)
- manual air vent (1)

Advantages:
- universal for all types of manifolds with a bar spacing of 210 mm
- accurate and easy to control
- pump included
- only 120 mm width of the mounted set

	Index	EUR	Packaging individual	Packaging bulk
with electronic pump 25-4-130 GPAII, Q_{max} = 2,4 m³/h	GM40GPA	269,99	1 pcs	-
with electronic pump 25-6-130 GPAII, Q_{max} = 3,0 m³/h	GM60GPA	289,99	1 pcs	-

1" manifold mixing group for 130 mm pump

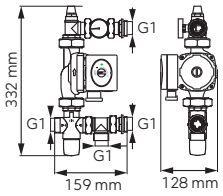

The group includes:
- 4-way thermostatic valve Rp3/4, Kv = 3.5 m³/h with temperature adjustment range 25 - 50°C (3)
- thermometer 0 - 80°C (2)
- manual air vent (1)
- 1 1/2" half unions for pump
- connections to the manifold with O-ring seal

Advantages:
- universal for all types of manifolds with a bar spacing of 210 mm
- accurate and easy to control

Index	EUR	Packaging individual	Packaging bulk
GM-WP	189,99	1 pcs	-

MIXING GROUPS

Description

Mixing group GM1F

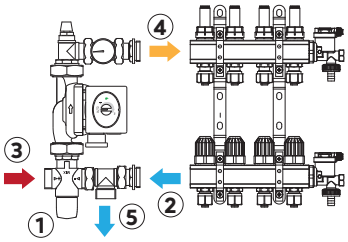

- The mixing group serves to lower and maintain the desired temperature of the heating medium in the surface heating system.

Parameters:
- static pressure (PN): max. 0.4 MPa (4 bar)
- dynamic working pressure: max. 0.3 MPa (3 bar)
- Kv: 1.9 m³/h
- temperature regulation range: 20 - 40°C
- accuracy of regulation: +/- 3°C

The group contains:
- 3-way thermostatic mixing valve
- air vent
- thermometer
- set of unions

Advantages:
- universal group for all manifolds with 210 mm bar spacing
- accurate and easy to control
- reversible

	Index	EUR	Packaging individual	Packaging bulk
with electronic pump 25-4-130 GPAII, Q_{max} = 2,4 m³/h	GM1F-40GPA	249,99	1 pcs	-
with electronic pump 25-6-130 GPAII, Q_{max} = 3,0 m³/h	GM1F-60GPA	249,99	1 pcs	-
without pump	GM1F-WP	199,99	1 pcs	-

1. Thermostatic mixing valve (controls the temperature in the floor system)
2. Return of cold water from the floor heating system
3. Hot medium supply of floor heating system
4. Supplying the floor heating system with a medium of the desired temperature
5. Return to the boiler

Mixed systems with GM1F group

The group reduces and maintains the desired temperature of the heating medium in the surface heating system.

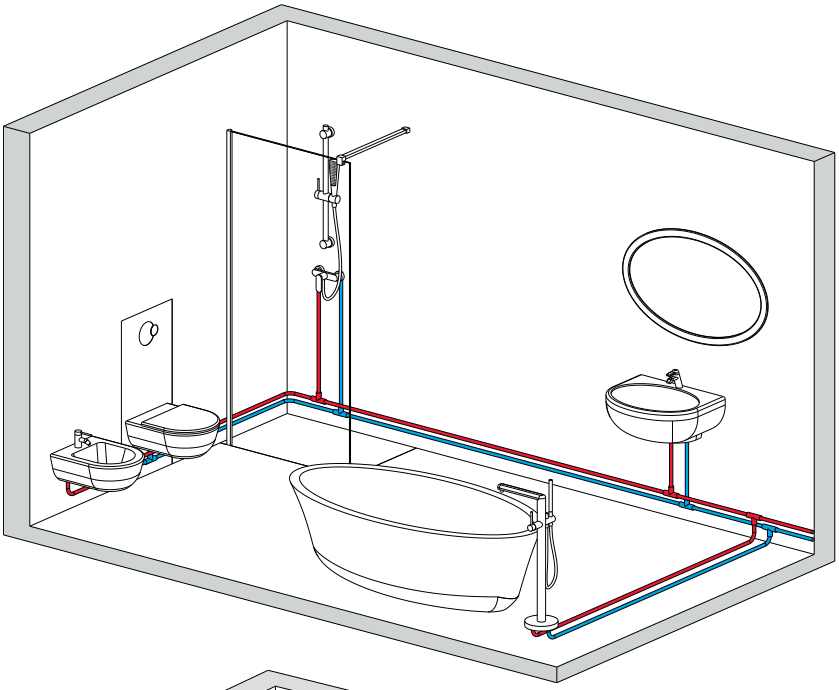

Installation diagram

When doing installation with manifolds, each distribution point (bathroom, kitchen, toilet, washing machine, dishwasher, etc.) is connected directly with a separate outlet in the manifold, which allows to cut off any point if necessary, without having to turn off the flow in entire apartment or building.

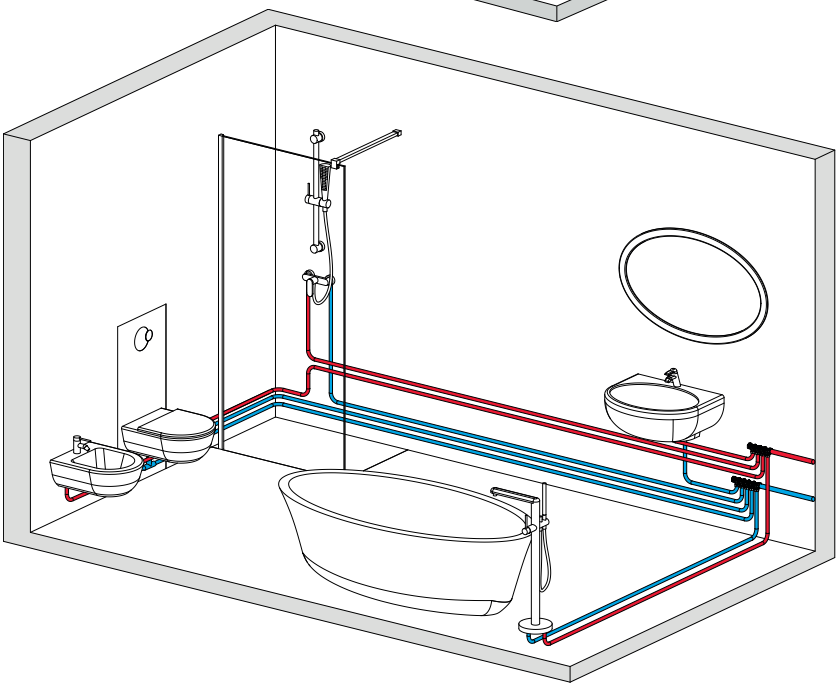

Comparison of expenditures with the use of each system

Type of installation	Branch system	Manifold system
Number of fittings (T-pieces)	7	0
Number of connections	30	20

4MS

Workmanship and materials:

- the forged brass body of the manifold was made with use of Advanced Body Technology of CW617N-4MS brass with reduced lead and nickel content
- the 1/2" outlets are integral elements of the brass beam, and the valve heads are placed at an angle so that they had the least possible influence on the flow through the manifold
- manifolds are adapted for potable water - the surface that is in contact with water (inside of the body and connection threads) is not nickel-plated
- the design of the beam as male-female fitting allows to create manifolds with a greater number of outputs with the modules
- The flow at each output is controlled by poppet type valves, and pipes are connected with 1/2" eurocone type fittings – for 16x2 mm plastic or multi-layer pipes and for 15 mm copper pipes
- due to the fact that usually the number of cold and hot water outlets in buildings is different - manifolds are offered as single beams, and the offer is complemented by sets of dedicated steel brackets for assembling sets consisting of two beams

Application and advantages:

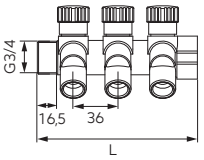

Sanitary manifolds are an increasingly popular alternative to branch distribution of domestic water. The main advantage of this solution is the elimination of the risk associated with making tee pipe connections in hard-to-reach places, e.g. in floors or walls, the repair of which in the event of leakage comes at a high cost. Pipe connections are made only at manifolds and water distribution points, which, together with the saving of time needed to complete the installation, allows to compensate the cost of purchasing the manifold and additional meters of pipe.

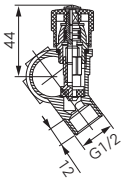

Another advantage of using manifolds is the pressure equalization at all points. When the flow is opened at one point, the pressure drop in the others is much lower than when using a branch distribution, thanks to which, for example, the troublesome effect of water temperature instability is eliminated. It's most often experienced when taking a shower and someone opens other cold water outlet which causes pressure drop in cold water line and rising the temperature in the shower.

Sanitary manifolds are used not only in houses and flats, but also in commercial buildings and public facilities - e.g. in hotels, dormitories, public toilets - where an additional advantage is control over individual outlets from places inaccessible to users. In such cases, sanitary manifolds are most often installed next to the domestic water risers and allow for shutting off the flow in only one device or room, thus ensuring the uninterrupted operation of the rest of the system.

Description

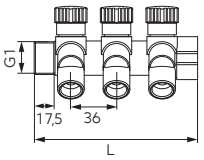

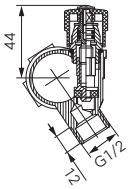

3/4" x 1/2" sanitary manifold

- 3/4" M-F beam, 2-4 ways
- poppet type shut-off valves

Advantages

- F-Comfort series valves were awarded the Gold Medal at the Poznan 2020/2021 International Trade Fair for Installations and Equipment
- warranty: 5 years
- valves are adapted to potable water - surface, which may have contact with water (inside the valve and connection threads) is not nickel plated
- solid metal handle
- the gland on the stem allows compensation of possible clearance by means of a simple wrench
- chrome plated and polished ball resistant to blocking
- thick walls and solid workmanship - increased durability and strength
- quality control carried out strictly in accordance with applicable European standards
- 100% of the valves produced are tested for leakage
- valve's bodies have permanent markings required by the European standards
- valves have removable rubber bands to identify installation on the hot water/supply or cold/return pipe and labels with EAN codes and the necessary data to facilitate retail sales

Operating parameters and scope of application

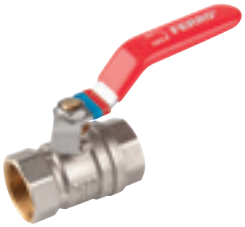

- nominal pressure: 2,0 MPa (20 bar)
- nominal working temperature: max. 100°C
- working media: water (water supply systems and central heating)
- ball valves have received a National Technical Assessment Certificate issued by the Building Research Institute in Warsaw stating suitability for use in construction and Hygienic Certificate issued by the National Institute of Hygiene in Warsaw

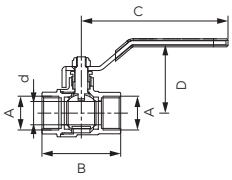

Workmanship and materials

- valves are made in ABT (Advanced Body Technology) technology, combining advanced design and material solutions
- body material: brass CW617N-4MS - the newest hygiene standard
- ball finish: chrome plated, polished
- ball sealing: PTFE
- stem sealing: PTFE

BALL VALVES - F-COMFORT

BALL VALVES - F-COMFORT

Description

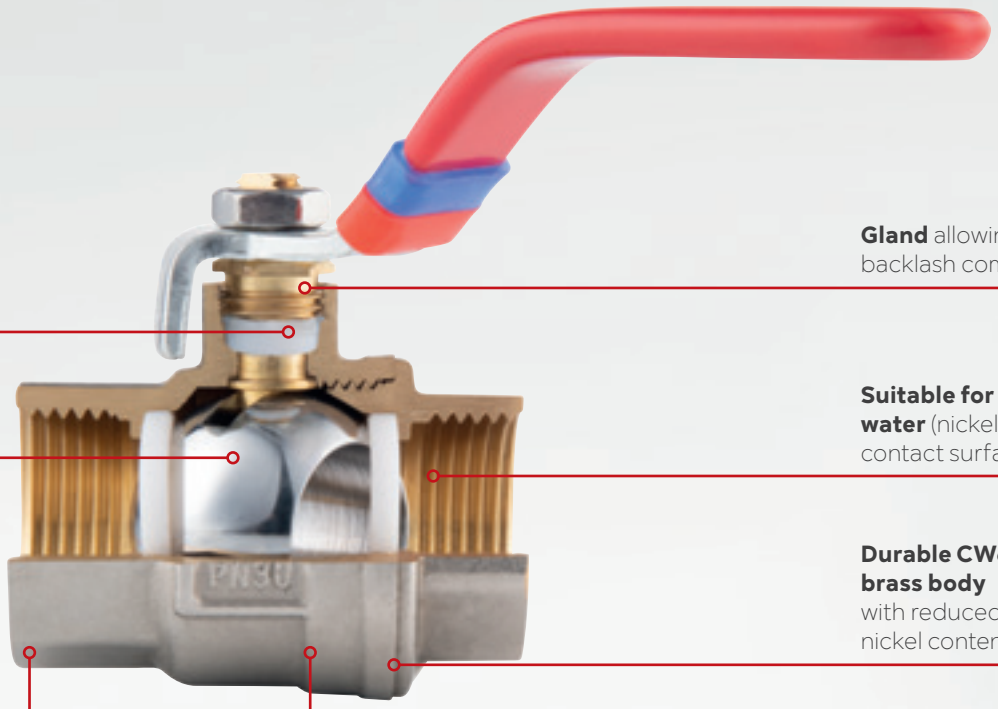

F-Comfort drain ball valve

- male
- hose connector and plug included
- body and ball material: brass
- material of ball and stem seals: PTFE
- double stem sealing (2 pcs O-ring)
- handle: metal butterfly
- nominal pressure: 10 bar (PN10)
- maximum working temperature: 100°C

DN	A	d [mm]	B [mm]	C [mm]	D [mm]	E [mm]	F	K_{VS} [m^3/h]	Index	EUR	Packaging individual	Packaging bulk	Retail (Eurohanger) Index	Retail (Eurohanger) EUR

F-Power
- ball valves

PTFE stem seal

Chrome plated ball

Gland allowing backlash compensation

Suitable for potable water (nickel-free contact surfaces)

Durable CW617N-4MS brass body with reduced lead and nickel content

Nominal **pressure 3,0 MPa**

Working **temperature from -30°C up to 120°C**

PN [bar] 30

Ni FREE

Tmax [°C] 120

4MS

Tmin [°C] -30

WARRANTY 10

H_2O

GLYCOL 50%

AIR

DN

Advantages

- warranty: 10 years
- valve bore without any constriction affecting the flow, full port according to standard
- valves are adapted to potable water - surface, which may have contact with potable water (inside the valve and connection threads) is not nickel plated
- solid metal handle
- the gland on the stem allows compensation of possible clearance by means of a simple wrench
- chrome plated and polished ball resistant to blocking
- thick walls and solid workmanship - increased durability and strength
- quality control carried out strictly according to applicable European standards
- 100% of the valves produced are tested for leakage
- valve's bodies have permanent markings required by the European standards
- valves have removable rubber bands to identify installation on the hot water/supply or cold/return pipe and labels with EAN codes and the necessary data to facilitate retail sales
- the use of the highest quality materials, care for solid workmanship, the use of modern technologies and multi-stage quality control have resulted in the new F-Power line being awarded the Quality International 2021 Gold Emblem

Operating parameters and scope of application

- nominal pressure: 3.0 MPa (30 bar)
- nominal working temperature: min -30°C, max. 120°C
- working media: water (water supply systems and central heating), max. 50% glycol solution in water , compressed air
- ball valves have received a National Technical Assessment Certificate issued by the Building Research Institute in Warsaw stating suitability for use in construction and Hygienic Certificate issued by the National Institute of Hygiene in Warsaw

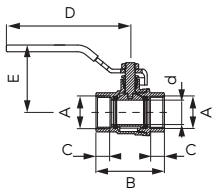

Workmanship and materials

- valves are made in ABT (Advanced Body Technology) technology, combining advanced design and material solutions
- body material: CW617N-4MS brass - the newest hygiene standard
- ball finish: chrome plated, polished
- ball sealing: PTFE
- stem sealing: PTFE
- stable and safe seating of the stem due to assembly from the inside of the valve

BALL VALVES - F-POWER

Description

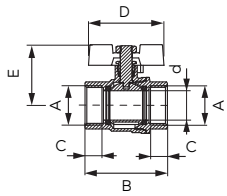

F-Power ball valve

- female-female
- full bore
- with gland
- handle: metal lever
- body material: brass
- ball material: brass (DN10 - DN50), stainless steel (DN65 - DN100)
- material of ball and stem seals: PTFE
- nominal pressure DN10 - DN50: 30 bar (PN30)
- nominal pressure DN65 - DN100: 25 bar (PN25)
- maximum working temperature: 120°C
- minimum working temperature: -30°C

Herkules
- ball valves

Advantages

- warranty: 15 years
- metal handle
- double stem seal
- valve bore without any constriction affecting the flow, full port according to standard
- connection threads with a large number of thread turns provides a secure and tight connection
- the gland on the stem allows compensation of possible clearance by means of a simple wrench
- chrome plated and polished ball resistant to blocking
- thick walls and solid workmanship - increased durability and strength
- quality control carried out strictly according to applicable European standards
- 100% of the valves produced are tested for leakage
- valve's bodies have permanent markings required by the European standards
- valves adapted to potable water - surface, which may have contact with water (inside the valve and connection threads) is not nickel plated

Operating parameters and scope of application

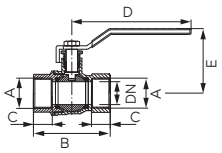

- nominal pressure: 4.0 MPa (40 bar)
- maximum working temperature: 140°C
- working media: water (water supply systems and central heating), max. 50% glycol solution in water (solar and central heating installations), compressed air
- Herkules ball valves type V17 have received a National Technical Assessment Certificate issued by the Building Research Institute in Warsaw stating suitability for use in construction and Hygienic Certificate issue

Workmanship and materials:

- bodies and nuts are made of moulded parts and processed by machine tools
- body material: CW617N brass
- ball finish: chrome plated, polished
- ball sealing: PTFE
- stem sealing: PTFE

Description

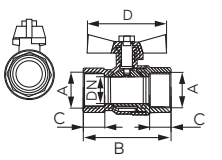

Herkules ball valve type V17

- female - female
- full bore
- reinforced with gland and double stem seal
- handle: metal lever
- body and ball material: brass
- material of ball and stem seals: PTFE
- nominal pressure: 4,0 MPa (40 bar)
- maximum working temperature: 140°C

Angle ball valves with half-union

Surface for flat seal

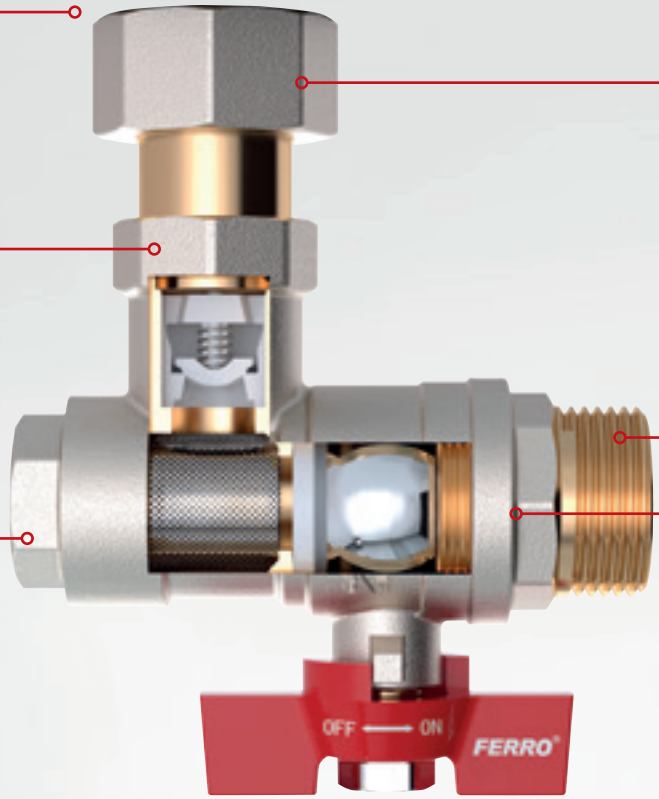

Swivel nut

CW617N-4MS brass
Latest hygienic standard with reduced nickel and lead content.

Suitable for potable water
(nickel-free contact surfaces)

Nominal **pressure 1,0 MPa**

Maximum **working temperature: 100°C**

Tmax [°C] 100

Ni FREE

PN [bar] 10

4MS

H_2O

GLYCOL 50%

Advantages

- the valve design allows for installation in small places available
- valves adapted for drinking water – surface, which comes into contact with drinking water (inside of the valve and connection threads) is not nickel-plated.
- solid metal handle
- a choke placed in the stem allows compensation of any clearances using a regular one flat wrench
- chrome-plated and polished ball resistant to the so-called "baking"
- thick walls and solid workmanship – increased durability and durability
- quality control carried out strictly in accordance with applicable European standards
- 100% of manufactured valves are subjected to testing tightness check
- the bodies have permanent markings required by the standard
- valves equipped with bands to identify hot water/cold or supply/return and a tag with EAN codes and necessary data to facilitate retail sales
- use of the highest quality materials
- wide range of applications

Application

- single-function gas boilers
- double-function gas boilers
- water meters, heat meters, hot water storage tanks
- heating and water installations where appliances require valves with a half-union and a flat seal

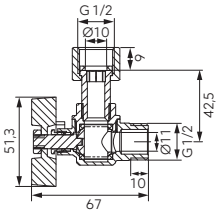

Workmanship and materials

- the nut of the valve drops below the connection face so that the appliance (e.g. gas boiler) can be easily removed for maintenance
- compact design enables installation in confined spaces
- mesh filters made of high-quality stainless steel protect the installation equipment from impurities
- check valve installed inside the ball valve protects the installation from backflow
- EPDM flat gasket included with the valve

ANGLE BALL VALVES WITH HALF-UNION

Description				

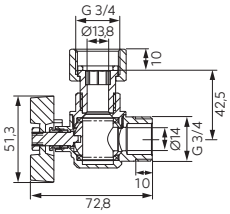

Angle ball valve with butterfly and 1/2 half-union, female-male

GLIKOL 50%

Operating principle

Magnetic cartridge contamination separators are devices used in various systems, especially in heating, cooling and industrial installations, to remove contaminants such as rust, metal filings and other particles from the working fluid.

Application

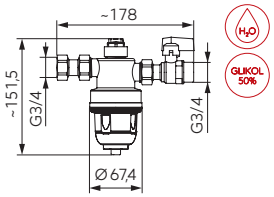

- In heating and cooling systems, magnetic separators help to keep the medium (water or glycol) clean, which in turn:
- Prevents damage to pumps, heat exchangers and other system components.
- Improves the energy efficiency of the system by minimising losses due to impurities.
- Extends the life of system components by reducing corrosion and deposits.

Installation

The separator is installed under the boiler to protect its internal components, primarily the circulation pump

MAGNETIC DIRT SEPARATOR

Description

Magnetic dirt separator

NEW

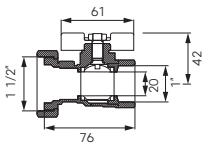

- body material/material
  stainless steel AISI 304, PA6, PA12, brass CW617N
- nominal pressure: 3 bar

Angle valves

Advantages:

- solid workmanship
- quality control carried out strictly according to the applicable European standards
- 100% of produced valves are subjected to tightness test
- valve's bodies have permanent markings required by the European standards
- internal surface suitable for potable water

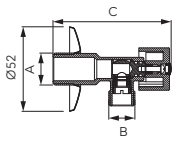

Operating parameters and scope of application:

- nominal pressure: 1,0 MPa (10 bar)
- max. working temperature: 100°C
- working media: hot and cold water (water systems)

Workmanship and materials:

- bodies made of high-quality CW617N brass
- seals made of NBR or PTFE
- stainless steel filter cartridges

Connection hoses

AISI 304

CW 617N

WARRANTY 10

H_2O

Advantages:

- strong and durable stainless steel braid
  - resistant to building lime
  - in contact with water no oxide formations appear on the surface of the hose creating stains optically resembling corrosion
- steel and brass elements connecting the flexible part with the end of the hose provide a long term, reliable and tight connection
- all flexible connections are subjected to 100% tightness test
- simple design and high reliability
- all connections have the manufacturer's markings and production year

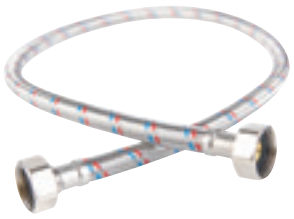

Operating parameters and scope of application:

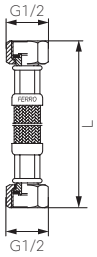

- nominal pressure: 1.0 MPa (10 bar)
- max. working temperature: 90°C
- working media: water (water supply systems and central heating)
- connection cables have a Hygienic Certificate issued by the National Institute of Hygiene in Warsaw

Workmanship and materials:

- connections (clamping nuts and connection ends): nickel-plated or chrome-plated brass
- outer braid and clamping sleeve: stainless steel AISI 304
- flat or O-ring seal: EPDM or NBR

Measuring devices

Description

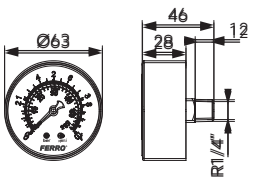

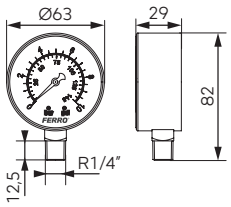

Measuring devices include manometers/pressure gauges, thermomanometers gaugess and thermometers that allow to measure the working parameters of the installation. The devices can be used in water installations, central heating and industrial installations. High technical parameters ensure accurate and reliable measurement.

Pressure gauges are based on Bourdon's tubular spring and their casings are made of high quality plastic. They offer measuring ranges from 0 to 4, 6 or 10 bar and are equipped with side or rear brass connections. Thermomanometers gaugess are devices that allow to simultaneously measure pressure and temperature in the system.

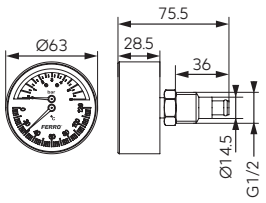

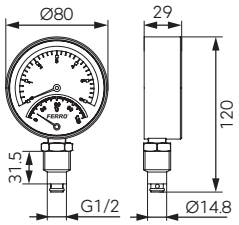

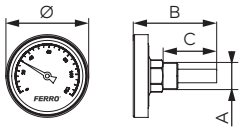

Dial thermometers are available in galvanized steel casings and their covers are made of scratch-resistant plastic. The measuring mechanism is based on a bimetallic spiral. The temperature measurement range is from 0 to 120°C and the dial diameters measure 40 mm, 63 mm, 80 mm and 100 mm. Dial thermometers are equipped with rear brass connections.

PRESSURE GAUGES

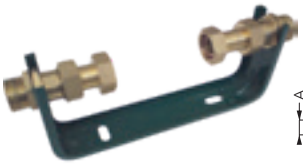

Description			
	**Pressure gauges** • casing: high resistance ABS • cover: scratch-resistant plastic • dial: powder-coated aluminium • type: pressure gauge with Bourdon tube spring • dial diameter: 63 mm • range: 0 - 4 bar • connection: 1/4" brass - rear connection

Gas valves

GAS

CW 617N

Advantages:

- valves meet the requirements of European standards
- are made of high quality materials
- have a Certificate of Constancy of Performance

Certificates:

Gas ball valves have been tested and audited in the production plant by the Oil and Gas Institute - National Research Institute in Krakow. On the basis of these tests and the audit, the Certificate of Constancy of Performance was issued.

Operating parameters and scope of application:

- pressure class: MOP 5 (0.5 MPa)
- temperature class: T2 (-20°C to 60°C)
- gas family: 1, 2, 3

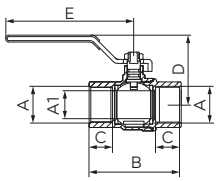

Workmanship and materials:

- body: high quality CW617N brass
- brass ball finish: chrome plated, polished
- ball seal: PTFE
- stem seal: double O-ring with NBR70 (on KGN models)
- PTFE and O-ring with NBR70 (KGS and KGMS models)
- lever: zinc-plated steel, yellow plastic-coated

GAS VALVES

Description

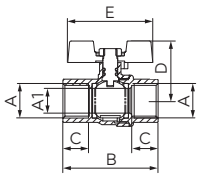

Gas ball valve - type G61

- female - female
- handle: metal lever
- body and ball material: high quality brass CW617N
- ball sealing: PTFE
- stem seal: double O-ring with NBR70
- max. working pressure: MOP5 (0.5 MPa)
- working temperature: T2 (-20°C to 60°C)

Gas hoses

GAS

WARRANTY 5

Advantages:

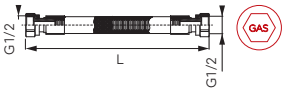

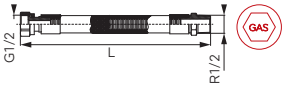

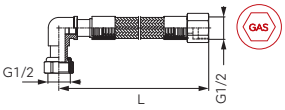

- available in a wide range of lengths - up to 200 cm
- available with three different types of connections, including an elbow connection
- unlimited bending radius

Operating parameters and scope of application:

- reaction to fire: B s2 d0
- working temperature T2 from -20°C to +60°C
- gas type: natural gas (2nd family gas fuels according to EN 437)
- max. working pressure: up to 0.5 bar
- in accordance with standard PN-EN 14800:2010
- application: for connecting domestic appliances inside and outside the apartments, with gas supply of a pressure lower than 0.5 bar. Suitable for use in locations subject to regulations on reaction to fire

Workmanship and materials:

- 3 types of protection:
  PVC coating
  stainless steel armour
  stainless steel spiral tube
- Nominal diameter: DN12

Safety group sets

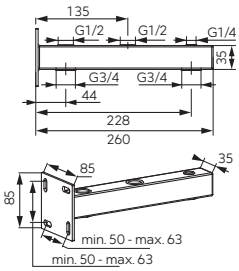

- The safety group set is a system protecting the installation against dangerous pressure increase caused by water temperature increase and its thermal expansion.
- working temperature: 95°C
- working pressure: up to 6 bar
- max. instantaneous water temperature: 110°C
- for expansion vessels with a capacity up to 35 l and a diameter not more than 320 mm
- 2 mm thick steel beam

Self-assembly kit. The set includes:

- safety valve
- pressure gauge
- automatic air vent with foot valve
- quick connector for expansion vessel

Expansion vessels for central heating

Water connection

Pre-load valve

Air chamber under pre-charge pressure

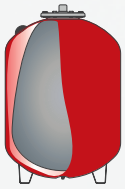

Durable deep-drawn steel tank

The ethylene-propylene diaphragm prevents contact between the water and the inner surface of the tank thus ensuring the purity of the medium in the system and preventing corrosion.

External epoxy coating prevents corrosion

When the system is turned on, the temperature of the water increases and thus it increases also its volume. Water fills the membrane that enlarges by filling gradually the vessel.

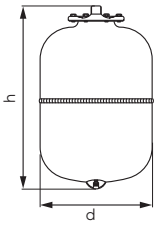

The volume of water increases until it reaches maximum working temperature. Then the membrane takes up practically the entire inside of the tank. An airbag stabilizes the pressure and the membrane prevents direct contact between water and the internal surface of the tank.

When the temperature gradually drops and the volume of water is reduced, it is pushed out from the tank until the membrane reaches its initial volume at that point a new cycle begins.

VESSELS FOR HEATING SYSTEMS

Expansion vessels for domestic water

Pre-load valve

Air chamber under pre-pressure

Durable deep-drawn steel tank

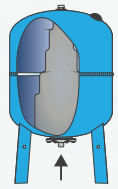

The ethylene-propylene diaphragm prevents contact between the water and the inner surface of the tank thus ensuring the purity of the medium in the system and preventing corrosion.

External epoxy coating prevents corrosion

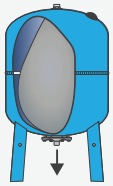

Water connection

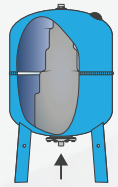

The membrane separates the water from the walls of the vessel, prevents corrosion and contamination of the installation and stabilizes the pressure. The first time the tank is connected to the system, the hydrophore pump is started, the pressure increases and the water fills the membrane.

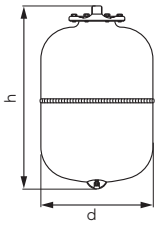

When the pressure reaches its maximum value, the pump stops. At that point the tank contains the maximum amount of water. The diaphragm expands and occupies almost the entire volume of the tank. When water is drawn, it starts to flow out of the tank without the need for the pump to operate, using the air cushion pressure.

The process continues, the diaphragm shrinks and the pressure drops to a minimum. The diaphragm returns to its original size
the pump restarts and a new cycle begins. Since the tank always ensures maximum water flow, the pump's operating periods are reduced to a minimum.

Description

Expansion vessels for domestic water or heating

5-year warranty for tightness in accordance with the warranty conditions attached to the product

Butyl membrane with enhanced resistance to osmosis and pre-pressure drop

Air chamber under pre-pressure

Pre-fill valve

Durable tank made of deep drawing steel

External epoxy coating prevents corrosion

Water connection

GWARANCJA 5

H_2O

GLIKOL 40%

Universal use

- In domestic hot water installations or C.O. as security against pressure increasing as changes occur medium temperature.
- In utility water installations as a hydrophore tank

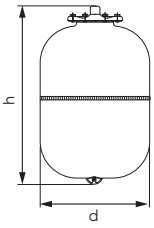

Advantages

- Use of butyl membranes - compared to EPDM membranes are several times more resistant to the phenomenon of osmosis, i.e. the penetration of air into the medium.
- Maintaining the initial pressure at the appropriate level translates into longer membrane life.
- Reducing contamination of the heating medium air means less influence on the others elements of the installation and thus contributes to it long-lasting and effective work.
- Connection flange made of high-quality material AISI 304 stainless steel – ensures optimal connection in all working conditions
- 5 years warranty for tightness, in accordance with the conditions warranty included with the product.
- The dishes are certified by the National Institute of Hygiene.

Technical parameters

- Initial pressure – 3.5 bar
- Media – water, glycol solution up to 40%
- Operating temperature from -10°C to 100°C
- Maximum working pressure: 10 bar
- Range of offer: 5 – 300 l
- Removable butyl membrane

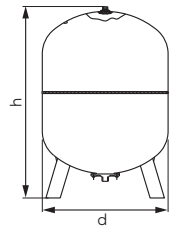

GLYCOL 40%

Heat exchangers

Maximum **working temperature 135°C**

Maximum **flow rate 4 m³/h**

Connections 3/4" male thread

Nominal **pressure to 1,6 MPa**

GLYCOL 40%

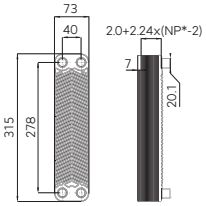

Operating parameters and scope of application:

- central heating installations
- thermocouples
- solid fuel boilers
- hot water installations
- solar installations

Flow: 4 m³/h (max)
Working pressure: 16 bar (max)
Working temperature: 135°C (max)
Test pressure: 20 bar
Connections: 3/4" male thread

HEAT EXCHANGERS

GLYCOL 40%

3/4" exchangers

- with insulation for installations with a thermo fireplace or solid fuel boiler

Application:
- central heating systems
- thermal chimney
- solid fuel boilers
- hot water systems
- solar systems

Characteristics:
- flow rate: 4 m³/h (max)
- working pressure: 16 bar (max)
- working temperature: 135°C (max)
- testing pressure: 20 bar
- connections: 3/4" male thread

High quality copper winding overheating resistant

TECHNOLOGY WINDING PLUS MOTOR INSULATION CLASS H 180°C

Protection against condensation

Ceramic shaft and bearings

Rotor made of PPE polymer reinforced with glass fiber

Robust **cast iron body**

WARRANTY 2

H_2O

Application

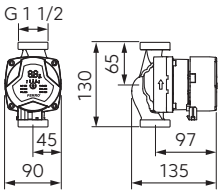

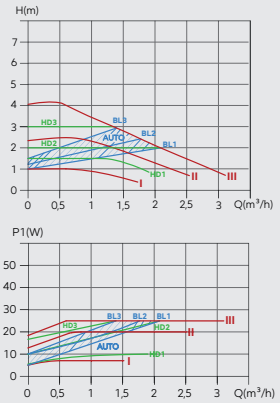

The application range of Ferro circulation pumps, which previously included heating and solar systems, has expanded to include cooling systems with the introduction of the GPA III series. These devices are protected against condensation, and the minimum medium temperature with a 50% glycol solution is -30°C. As a result, these products are ideal for use in systems such as reversible heat pumps.

Energy efficiency

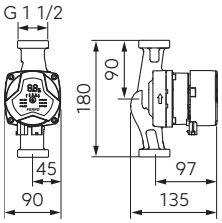

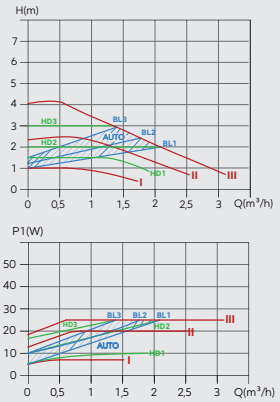

The GPA III series was designed to optimize energy consumption and minimize environmental impact. These pumps are powered by an electronically controlled, efficient motor, which allows them to achieve a low Energy Efficiency Index (EEI) of ≤ 0.20.

Advantages

- High parameters
- Ability to work with a medium with a negative temperature
- Multiple operating modes
- A wide range of applications - heating, cooling
- Low energy consumption
- Modern design
- Compact dimensions
- Multifunctional display
- Highest quality materials
- Winding Plus Technology
- A wide range of products - 7 models

Description			
		**Circulation pump GPA III 25-4-130** • Operating range: max. 2,8 m³/h • Lifting height: max. 4 m • Media: water, glycol 50% • Application: Clear liquid, free of solids, fibrous or mineral oily substances, non-viscous, chemically neutral, non-corrosive and non-explosive, with Similar to water, pumping a fluid with a viscosity pumping a fluid with a viscosity significantly higher than that of water will result in a significant deterioration pump may not function properly, The pump can be operated with glycol up to 50% concentration, in The pump may be operated with up to 50% glycol, in such cases the pump will operate with a reduced capacity. • Minimal inlet pressure depending on the liquid temperature: 0,05 bar up to 75°C; 0,5 bar up to 90°C; 1,08 bar up to 110°C • Liquid temperature [°C]: +2 - +110 for water; -30 - +110 for a 50% glycol solution • Ambient temperature [°C]: 0 - +70 for water; -30 - +70 for a 50% glycol solution; RH <95% • Maximum pressure: 10 bar • Protection class: IP 44 • Insulation class: H • Energy Efficiency Index: ≤0.20 • Installation: with the shaft in a horizontal position • Operating modes: AUTO, HS - constant speed curves, BL - proportional pressure curves, HD - constant pressure curves, PWM - external input signal control (pulse width modulation) • Included: flat gaskets (2 pcs.), 100 cm power cable • Voltage ~230 V (-6% – +10%), 50/60 Hz • Power consumption: 5 – 25 W; 0,04 – 0,25 A • Connection spacing: 130 mm • Connection: G1 1/2	NEW

- Lifting height: max. 7,5 m
- Media: water, glycol 50%
- Application: Clear liquid, free of solids, fibrous or mineral oily substances, non-viscous, chemically neutral, non-corrosive and non-explosive, with Similar to water, pumping a fluid with a viscosity pumping a fluid with a viscosity significantly higher than that of water will result in a significant deterioration pump may not function properly, The pump can be operated with glycol up to 50% concentration, in The pump may be operated with up to 50% glycol, in such cases the pump will operate with a reduced capacity.
- Minimal inlet pressure depending on the liquid temperature: 0,05 bar up to 75°C; 0,5 bar up to 90°C; 1,08 bar up to 110°C
- Liquid temperature [°C]: +2 - +110 for water; -30 - +110 for a 50% glycol solution
- Ambient temperature [°C]: 0 - +70 for water; -30 - +70 for a 50% glycol solution; RH <95%
- Maximum pressure: 10 bar
- Protection class: IP 44
- Insulation class: H
- Energy Efficiency Index: ≤0.20
- Installation: with the shaft in a horizontal position
- Operating modes: AUTO, HS - constant speed curves, BL - proportional pressure curves, HD - constant pressure curves, PWM - external input signal control (pulse width modulation)
- Included: flat gaskets (2 pcs.), 100 cm power cable
- Voltage ~230 V (-6% – +10%), 50/60 Hz
- Power consumption: 5 – 25 W; 0,04 – 0,25 A
- Connection spacing: 180 mm
- Connection: G2

Description			

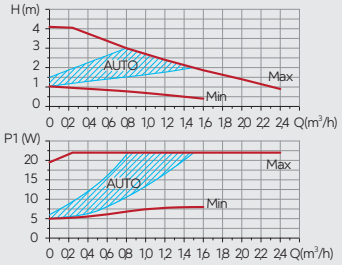

GLYCOL 30%

GPA II 25-4-180 circulation pump

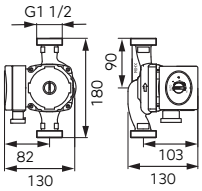

Characteristics:
- operating range: max. 2.4 m³/h
- lifting height: max. 4.1 m
- liquid temperature: min. +2°C, max. +110°C
- application: Clean, free of solids, fibres and mineral oily substances, non-adhesive, chemically neutral, non-corrosive and non-explosive, with parameters similar to that of water. Pumping in liquids of a viscosity significantly higher than water will cause significant deterioration of the operating parameters, the pump may not operate properly. The pump can be used with a glycol concentration of up to 30%, and in such cases the pump will operate at a reduced efficiency.
- minimal inlet pressure depending on the liquid temperature: 0.50 bar (up to 85°C), 0.28 bar (up to 90°C), 1.00 bar (up to 110°C)
- maximum pressure: 10 bar
- protection class: IP 42
- insulation class: H
- energy Efficiency Index: ≤0.23
- installation: with the shaft in a horizontal position,
- cable gland pointing down or to the side
- voltage: ~230 V (-6% - +10%), 50/60 Hz
- power consumption: 5 – 22 W; 0,05 - 0,19 A
- connection spacing: 180 mm
- connection: G1 1/2
- ambient parameters: 0°C - 40°C; RH <95%

Thermostatic head disassembly blocking device

- ABS ring to be locked on the nut of the thermostatic head
- Fits: GT10, GT11, GT12, GT20
- Prevents removal of the head without tools
- One-off use lock, can only be removed by destroying it
- Used with GT12 head, it additionally prevents change of setting limit
- The set includes an additional element for blocking GT12 head settings

Radiator valves

Robust body

Double seal (nitrile rubber and a brass nest)

Large number of thread turns

Sandblasted and nickel-plated body

Nominal **pressure 1,0 MPa**

Max. **working temperature 100°C**

H_2O

GLYCOL 50%

Advantages:

- all radiator valves are subjected to 100% tightness test
- simple design, high reliability
- double seal in control valves: rubber gasket and special brass seat
- the valve body is embossed with permanent markings, including the manufacturer's label

Operating parameters

- nominal pressure 1.0 MPa (10 bar)
- working temperature up to 100°C
- working media: hot, cold, central water heating
- radiator valves are attested by the Institute of Energy in Radom

Workmanship and materials:

- bodies and nuts are made of moulded parts and processed by machine tools
- body material: brass
- seals: nitrile rubber NBR, brass socket
- lever/knob: ABS

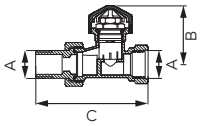

Finishing:

- radiator valves are sandblasted and then nickel-plated
- following special orders - valves can be only chromed or just sandblasted

THERMOSTATIC VALVES

Description

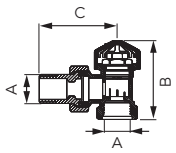

Straight thermostatic valve

- max. permissible static pressure: 1 MPa
- max. permissible pressure difference: 0.06 MPa
- max. working temperature: 100°C
- connection thread for head: M30 x 1.5

RADIATOR SETS

Description			
	**Thermostatic set for bottom connected radiators, straight** Elements of the set: • Thermostatic head with M30 x 1.5 connection (fits Heimeier thermostatic inserts) • universal connection valve straight for V-type radiators • connections 3/4" M x F3/4" F or 3/4" M x 1/2" M • reduction nipples included Technical parameters: • max. working temperature: 100°C • max. working pressure: 1.0 MPa (10 bar) • max. ambient temperature: 50°C • scale of adjustment: 0 - 5 • temperature control range: up to 28°C • valve connection diameter: MT3/4" x MT3/4" or MT3/4" x MT1/2"

Description

Decorative thermostatic set with preset adjustment, immersion sleeve, and thermostatic head, chrome NEW

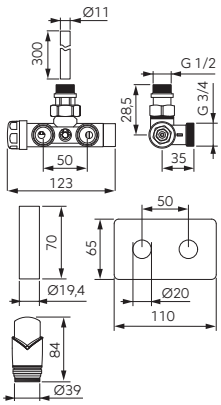

Elements of the set:
- GT31 thermostatic head
- integrated angle valve with with presetting and 1/2' radiator connection
- 15 mm copper pipe connectors
- 16x2 mm multilayer pipe connectors
- cover and decorative pipes
- immersion sleeve

Thermostatic head:
- connection: M30 x 1.5
- max. ambient temperature: 50°C
- adjustment scale: * - 5
- adjustment range: up to 30°C
- anti-freeze protection: ~ 9°C

Technical parameters:
- max. working temperature: 100°C
- max. working pressure: 1 MPa (10 bar)
- universal valve - change of direction to left or right by installer

		Packaging	
Index	EUR	individual	bulk
ZTT30CR	54,99	1 pcs.	20 pcs.

Decorative thermostatic set with preset adjustment, immersion sleeve, and thermostatic head, anthracite NEW

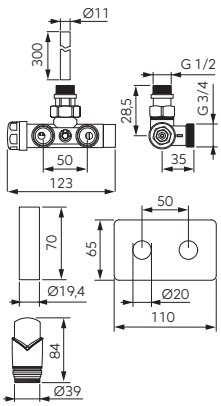

Elements of the set:
- GT33 thermostatic head
- integrated angle valve with with presetting and 1/2' radiator connection
- 15 mm copper pipe connectors
- 16x2 mm multilayer pipe connectors
- cover and decorative pipes
- immersion sleeve

Thermostatic head:
- connection: M30 x 1.5
- max. ambient temperature: 50°C
- adjustment scale: * - 5
- adjustment range: up to 30°C
- anti-freeze protection: ~ 9°C

Technical parameters:
- max. working temperature: 100°C
- max. working pressure: 1 MPa (10 bar)
- universal valve - change of direction to left or right by installer

DESCRIPTIONS OF THE ICONS USED

SANITARY FITTINGS & ACCESSORIES

BATHROOM FITTINGS

Eco+
Products with this sign use less water and energy compared to standard models.

FERRO AirMix
The faucet aerator with additional water aeration system. It allows you to use less water while maintaining the comfort of a rich stream.

Ferro Eco Save
Ferro Eco Save limiter allow water savings of up to 50%. Installed in shower mixers they reduce the water flow.

FerroClick
Hot water control system and full open flow control system.

Thermostatic mixer
The hot water lock protects against scalding and ensures a constant water temperature of 38°C.

Easy Clean
Spray handle nozzles and aerators made of plastic from which limescale deposits are easily removed.

AutoClean
The function of automatic removal of limescale from shower handle nozzles

AIR-IN System
The spray handle aeration system, thanks to which we save water while maintaining the comfort of a large jet.

Click-clack
Products with this icon come with a click-clack plug, which can be opened and closed by pressing it.

Pull-out shower handle
Mixer with pull-out shower handle.

Two sources
The product allows you to connect and use two water outputs.

Slim Design
Rainshower plate with a modern low profile.

Adjustable spray angle
Infinitely adjustable setting of the angle of the rainshower plate

Multiple types of jet
Possibility to change the type of stream.

Anti Twist
Hoses with an Anti-Twist tip do not twist.

Vertical adjustment
Vertical adjustment of the mounting bar.

Horizontal adjustment
Adjusting the distance of the bar from the wall

Safe Touch System
The faucet body does not heat up when using hot water.

KITCHEN FITTINGS

Cold Start
This function allows you to run cold water in one movement, thus saving energy and increasing your comfort, whenever you want to quickly fill a vessel with cold water.

Shower / Spray
A mixer with the ability to switch between two types of spray.

Pull-out spout
The spout with pull-out hose increases the comfort of filling high vessels and allows for precise washing and rinsing.

Flexible spout
The spout can be freely controlled to precisely direct the jet when rinsing or filling dishes.

Rotational spout
The spout rotates 360 degrees.

Foldable spout
The mixer is designed to be installed in front of a window, the folding spout allows it to be opened.

Two spouts
A product with two independently controlled spouts.

Mixer for unpressurised, flow-through water heaters

Mixers with filter for water

Reversible sink
Mounted with drainer on left or right side.

Cork plug in the set
Cork plug complete with sink.

Siphon trap included
Products equipped with a siphon.

INSTALLATION AND HEATING TECHNIQUE

Product warranty period expressed in years. The number placed in this sign informs about the warranty years for the product.

Individual packaging
Product in individual packaging with a barcode for retail sale.

Nickel FREE
All product elements which may have contact with potable water are not covered with nickel.

Filter

Neodymium magnet

Check valve
